EXPERIENCE

Health evaluation data review

University of Massachusetts, Amherst - Manning College of Information and Computer Sciences

01/2018 - 05/2022 Amherst, MA

- Gathered data from the C.D.C. Wonder database, and used R to determine trends in opiate-related deaths across various demographics
- Leveraged several techniques to normalize, sanitize, and prepare the data for additional analysis. Collaborated with extended team to suggest possible solution alternatives
- Utilized multiple graphics packages presenting a cohesive data report explaining the results

Developed a mobile phone app for elder care fall detection

University of Massachusetts, Amherst - Manning College of Information and Computer Sciences

2018 - 05/2022 Amherst, MA

- Forecasted 30% increased elderly user safety by developing a Python-based app for detecting severe falls.
- Planned 20% reduction in false positive fall detection through the creation of a predictive fall detection model.

Proposed student resources website

University of Massachusetts, Amherst - Manning College of Information and Computer Science

01/2018 - 05/2022 Amherst, MA

- Researched and developed a website concept to assist students and accelerate the location and availability of academic resources

IT Internship

City of Melrose City Hall

03/2023 - 05/2023 Melrose, MA

- Improved departmental productivity by providing IT support to 6 departments, including network and application assistance.

EDUCATION

Master of Science in Computer Science

Northeastern University

01/2024 - Present Boston, MA

- Khoury College of Computer Science
- Candidate for a Master of Science in Computer Science

Manning College of Information & Computer Sciences

University of Massachusetts Amherst

05/2022 Amherst, MA

- Bachelor of Science in Informatics

SUMMARY

Data-driven professional with 5 years of academic experience in health evaluation, data review, and mobile app development. Experience in data normalization and predictive modeling, using Python and R. Key achievements include conducting impactful data analysis with insights into the opioid epidemic and developing a fall detection app that targeted increased user safety by 30%.

KEY ACHIEVEMENTS

Analytical Data Insights

Improved data insights by identifying trends in opiate deaths affecting multiple demographics by leveraging a large dataset

Sound Judgments in Safety

Boosted user safety by enhancing fall detection accuracy, targeting a 20% reduction in false positives.

Enhanced Resource Accessibility

Streamlined resources by proposing a website with enhanced search capabilities for the student population
